Project Proposal

Website Theme

The website will be designed as an Austin Tourism service. It will have some highlights of the city including great places to eat and explore both during the day and at night. It should help people find the best places in town to experience all that Austin has to offer. Find places to eat or somewhere cool to get out of the sun and catch a show. I want the website to show off what makes the city special and why it's such a great place to visit or live.

Website Pages

Main Page:
The main page will be an overview of what the website has to offer and will have a picture carousel of images from around the city. The main page will also have links to the other subpages via a horizontal navbar. I plan on using some of bootstraps navbar components to help with design and appearance.

Concerts/Events Page:
This will be a page the shows some of the major events occurring in Austin in the coming months. Admittedly, I'd love to make this live by pulling information from a website like Do512 or Visit Austin, but time and knowledge may be restrictive. If possible, I'll try to implement this functionality.

Venues Page:
Austin is the 'live music capital of the world' so there will definitely be a page that highlights the music venues and comedy clubs around town. This will also detail some of the night life activity including bars, and the distinct flair for each downtown district. If you're into a certain genre of music, you can find out which venues will be more accommodating to you and your interests.

Restaurants Page:
There will be a page that highlights some great restaurants with a brief synopsis of their food and their location. This will include images of the building and some insights on the menu.

Parts of the City Page:
There will be a page that details the different sections of the city. Austin has many parts of town, all of which provide their own eclectic charm.

Requirements

The web pages should be presentable as a whole; the interface should be user friendly (text should be easy to read); the website should contain pictures or videos.

- The website will include pictures throughout. Every page will include images from the city or pictures of restaurants, bars or music venues. I may attempt to embed some youtube videos of austin on the homepage (I'll need to research how to make this possible).

Website has 1 homepage and at least 3 subpages; the homepage and subpages have a horizontal menu that leads to the other pages.
- The primary pages for this website have been detailed above in the Website Pages section. There will be at least the minimum number of required pages, however, if time permits, I will try to add as many pages or features as possible to learn more about Web Development.

The homepage has picture carousel animation (slideshow effect, for example, pictures in this page http://oregonstateparks.org/ (Links to an external site.)Links to an external site.)
- The homepage will include an animated picture carousel that cycles through several general pictures of the city. I'll likely add some photos of the of the art projects around town and the parks and festivals that we have in Austin.

Have a scroll box in one page. You can put anything inside the scroll box.
- I'll include the scroll box inside the calendar/events page. It will contain the overview text section of the page before listing concerts and events occurring around the city.

One page has unordered HTML list with several entries.
- I'll be using the unordered HTML list often in the website, sometimes in ways that aren't overly apparent. The picture carousel on the main page will likely involve an unordered list as well as a lot of the subpages to organize content. To ensure that the requirement is met, I'll add an unordered list to some of the text outputs on the restaurants and music venues pages.

There is a button to download files (map to the farm, menu in the restaurant, a personal CV, etc.) The downloaded file can either open in the browser or download to the local computer.
- I will be including the ability to download a PDF version of the Austin Insider Guide for 2017 and 2018. It expands, in greater details, the topics discussed on this website. I'll use a button to perform this action with JavaScript's addEventListener.

There is a link that you can click and leads to outside webpages (linkedin, yelp, email, etc.)
- I will be including many external links throughout the website. Each venue or restaurant will have a link to their own respective personal websites (if available) whenever mentioned. I will also be including an external link to the City of Austin's government homepage that includes a lot of official information and news.
